Konza Environmental Education Program

Summer Teacher’s Workshop – come and experience all of the educational activities at Konza!

Overview:

♦ The Konza Environmental Education Program’s objective is to teach students the process of science through hands-on ecological research during their visit to the tallgrass prairie.

♦ Our program invites K-12 teachers to our site for one week in the summer to learn all of the different activities available to students.

♦ Teachers immerse themselves into the prairie! The group works together to learn about the prairie and conduct each of the activities available.

♦ During the week, teachers construct an individualized experience tailored for their class.

♦ We then help plan a visit for the class to visit the prairie and participate in the program developed by the teacher!

Perks for participants:

♦ Teachers who participate in a Summer Workshop qualify for a $125 bus credit to bring their students to the prairie.

♦ On-site lodging available.

♦ Graduate credits from Kansas Stat University, College of Education, are also offered.

♦ Researchers are invited to join our group – you can learn about the latest research along the way.

♦ Lunch provided each day.

Dates: June 13 – 17, 2016

Cost: $25
